mber Salt Lake Stock Ex-

more is a possibility that a second Mercur max yet be found, and there are
quite a number who are quietly making an inspection of this locality; and
one thing is certain, and this is that
good grass root values in gold are being found and that some of the rock
that is being brought in from the locality mentioned can hardly be distinguished from the ore that comes from
the mines of Camp Floyd district.

Yesterday a Herald representative,
at the solicitation of one of the owners
of the Mascot group, which is located
in the foothills this side of the Warm
Springs, made a visit to this property,
and so accessible is the property that a
trib was made to the Drospective bonanca and back again in just 45 minutes.

Taking the Content street can at the

Taking the Center street car at the Taking the Center street car at the Walker bank corner, or Main street, the party alighted several blocks south of Warm Springs and a walk of about two blocks east into the foothills brought the visitors to the prospect. But little work has been done on the claim; possibly not more than open cut of about six or eight feet in length, from which a six-foot hole has been aunk. There are no croppings at the from which a six-foot hole has been zunk. There are no croppings at the ledge, but at the grass-roots the soll has been washed off in places exposing fron-stained quartz, and in this way the deposit can be traced for some distance, and it is stated that this fron-stained one carries varies on the sur-

Are Interested.

The Mascot group, composed of three claims, is owned by Counciln n M. E. Mulvey, R. J. Halinan, Emery Lovejoy and Will Griffith, and it is the intention of these gentlemen to do considerable work in its development, as they feel confident that it will open out into a paying producer.

It is claimed that some of the quartz pans free gold.

Pioneer. The late report to the effect that Mr.

will make his selection of a place to begin operations.

A Mr. Heller from Salt Lake arrived in camp Thursday for the purpose of beginning operations on the Deer Trail. A force of men will begin work there the first of the week.

Snow in most of places prevents any work at present, but wherever the ground can be reached it is being acted upon.

manager of the Lucky Boy mine, near day afternoon, was feeling in excellent spirits over reports just received from this bonanza proposition, which, mass he stated, were to the effect that the rock. shaft in this property had reached the sixth level, which is a hundred feet below the fifth, and that the men had cut a station on the lower level, and in doing this, according to the letter from Superintendent William Norman, the vein had been cut, showing a body of mineral between four and five feet in width which looks like good ore, but as assay tests had not been made of the new strike, its value had not been ascertained. "Drifts will be run east and west on

new ore body," said the colonel, 'and it will be prospected in a thor-

ough manner."

"At the present time," continued Mr. Treweck, "work is being pushed in sinking the winze, 450 feet west of the main shaft, from the fifth to the sixth level, for the double purpose of blocking out ore and giving better ventilation to the workings in the mine. The extent of the ore body as shown on the fifth level is upwards of 500 feet in length, and it will average five feet in width, with average values of \$18 in gold and \$7 or \$8 in silver to the ton, while in other portions of the Ulah closed strong at the figures noted in yesterday's Herald.

The parties who have the No-You Don't bonded, have ordered a Burfeigh of these securities held their own in fairly good shape. Northern Light sevined to be the favorite with the brokers, and the stock sold freely at slowly advancing figures. Little Pitts frausfers at 2% cents and made frausfers at 2% cents

Through an accident that occurred on January 29," the colonel went on to say, "which resulted in the break-ing of the cylinder that drives the Swansea was a triffe strong in the bidding, but shaded in the offerings. No one second to want Sunbeam, and the stock was weak; while Euckeye failed to show up in as good form as it did the day before.

The transactions of the day were as follows:

SALES OF STOCK.

SALES OF STOCK.

1,000 Little Pittsburg at 2% cents.

The Florence, Idaho, correspondent to the Grangerville Free Press makes mill, the plant is now closed down, but a new cylinder is now on the way. The strikes, as follows:

Last night in the lowest level of the Banner mine, the workmen cut into the largest ore body yet found on this property. The ore is the very highest strade as shown by pan test. This discovery banishes all doubt as to the gold, and ray pan amaigamation for The ores hitherto have been worked by the chlorimation process, but the company now proposes to adopt what is known as the wet process, using copper plates for the saving of the free gold, and ray pan amalgamation for the silver and for any gold that may not be saved on the plates.

The company recently made a test on Lucky Boy ores at a neighboring.

This strike seals the future greatness destined for the gold mines of Florence to attain.

Another strike within the past three days on the Elkhorn by Charles Lumphorn & Co. creates a riffle of excitement. The ore body now exposed is three feet in width of oxide iron quariz three feet in width of oxide iron quariz the very best grade. This property is situated about three miles west of the lianner on the headwaters of Slate creek, showing our ore deposits cover a great area of country.

both through earthquake and volcanic channels, and this advantage has been used to such an extent that the present surface finds are not permanent, but only indicators of what future deep workings will expose to view. Native gold, in form of both

COARSE FLAKES AND WIRES, has been found here, and native silver, as well as sulphurets, have also been

has been found here, and native silver, as well as sulphurets, have also been encountered in the same locality, principally in the porphyritic formation, while bunches of iron-stained sandstone have yielded returns of upwards of \$1.000 per ton, and the slates of this region also carry gold in variable quantities and need not be overlooked by the prospector.

The deepest working in this district consists of one shaft having a vertical depth of 54 feet, which connects with a tunnel 200 feet long (all of this working showing pay ore) running through the crest of the hill, exposing a slip on the slate formation from quite a large contact vein of auriferous bearing ore (principally decomposed porphyty), yielding from \$1.50 to several hundred dollars per ton in value of the vellow metal.

The ores of this region thus for disc

dollars per ton in value of the vellow metal.

The ores of this region thus far discovered (no veins really in place having yet been opened up) are partly free milling or stamping, and partly concentrating, as all of them contain more or less white iron, and the latter in some instances here carries appreciable quantities of gold.

The two stamp mills operating here last fall have thoroughly demonstrated the quality of the ore, both as to value and means of treatment required, by their crushing some 200 tons of the various mineralized rocks encountered and saving from

\$9 TO \$30 PER TON

in gold on the plates and having fair INDICATIONS OF ENORMOUS quantities of concentrates, which latter yield good gold values, as shown by assays made from average samples.

In this region, located near the south end of the range, where the prospecting seems to have been carried on most extensively

ONE CAN GET GOLD COLORS from various rocks and from much of

from various rocks and from much of the soil, and the presence of minute particles of magnetic oxide of iron, carrying gold, being disseminated all over the region, in great quantity, only goes to back up the statement that this gold came from the nearby interior, and hence only awaits capital to encourage the claim holder to attain a reasonable depth in order to open up to the world one of the great gold producing regions of the century.

Much of the original sedimentary formation has been thrown off and drifted away from these hills, since their formation, and the box canyons surrounding this range show that severe earthquakes and perhaps frequent recurrences of them, have buried the veins under many feet of debris, but the float found on the surface at intervals is a sure enough indication that with workings reaching into solid formation, fissure or contact veins of great richness cannot fall to be encountered, which will amply reward the party taking the risk.

All claims in this region are 600 by 1,500 feet in surface measurement and a vast area in this region only awaits

All claims in this region are 600 by 1,500 feet in surface measurement and a vast area in this region only awaits the coming of the hardy prospector, as but 100 claims are all that have

been staked.

This region is now well supplied with good wagon road facilities, extending from the desert up to the extreme top of the range, with a fair average grade, which enables one to

REACH ALMOST ANY POINT

AYER'S

Sarsaparilla Is the original Sarsaparilla, the standard of the world. Others have imitated the remedy.

They can't imitate the record: **50 Years of Cures** 

city yesterday, was the bearer of good

city yesterday, was the bearer of good news, as he states that on Sunday last a fine body of ore was encountered in the Triumph workings, in consequence of which the future of this property is as good as assured.

For some time past development work in the Triumph has been pushed in the shape of a tunnel in a westerly direction from the bottom of the 100-foot shaft, and on the first of the week, as stated above, a body of ore was broken into and while the full face of the drift is in ore and the vein has been cross-cut for a distance of two feet, the extent of the deposit was not known when Mr. Kirby left the mine, but it is believed that it is a chute of mineral of considerable magnitude. Mr. Kirby took with him average samples from the vein, from which assay values of 13.5 per cent lead and 20.3 ounces in silver were obtained; while from another sample values of 23.5 per cent lead and 28.3 ounces in silver were show.

It is the intention of the company to push work in the prospecting and development of the new find, and as soon as it is opened satisfactorily the shall will be deepened another hundred feet and another drift run to the vein, and

and another drift run to the vein, and in the meantime it is more than likely that consignments of ore will be made. The Triumph group joins the Sunbeam on the southeast and the Undine on the west, and it is considered as one of the most promising pieces of ground in that portion of the camp.

On the strength of the report of the strike there was an active demand for the stock of the company yesterday, and it is stated that 25,000 shures of its treasury shares changed hands in consequence.

The officers of the company are highly elated over the showing made in the mine, and they are satisfied that there is no question of doubt but that the property will come to the front at an early day as a regular shipper and dividend payer.

THE ALICE REPORT.

Excellent Showing Made by This Montana Property.

The Alice Gold and Silver Mining

kept in good condition. The Blue Wing has been producing considerable ore of an excellent quality for several months past and is now looking very well. The other mines are looking about the same as at the time of the last report. The silver product sold for a little more than it did during 1895. I trust that the company will be able to get a better price for its silver product this year than it has done in several years past.

THE HARDSCRABBLE MINE.

The Lessee and Contractor Finds a Body of Copper Ore.

Like Banquo's ghost, the mines of the Hardscrabble will "not down," and The Herald is informed that a few days ago a valuable deposit of copper was found in the property in this locality owned by the Hardscrabble Mining

company:

Some time ago Charles Holden and his associates took a contract for the extension of the Hardscrabble tunnel a distance of 100 feet, taking their pay in the capital stock of the company, besides which it was agreed that they should receive a royalty on all ores found and seld while doing this work.

The contractors and lessees began

found and sold while doing this work. The contractors and lessees began work in the mine some time since, and a few days ago, after driving the tunnel into the hill a distance of 60 feet, a six-foot ledge was encountered that carried values of from 5 to 25 per cent copper and \$1.60 in gold to the ton. Mr. Holden is employing a force of 5 men in the development of the property, and it is the intention to make a trial shipment as soon as possible. The officers and shareholdens of the company are feeling highly elated over the strike and are confident that this

the strike and are confident that this mine will soon grace the list as a pay-ing proposition.

ing proposition.

At the Morgan mine, in the same lo-cality, the company is working seven men in the development of the prop-erty. The tunnel in this ground is be-ing extended into the hill, and it is re-ported that the indications are very tayorable. favorable.

Ore and Bullion. The ore and bullion receipts yester-

day were as follows:
Commercial National Bank—Gold and silver bar, \$1,100.
T. R. Jones & Co.—Bullion, \$4,600; ores, \$9,500. McCornick & Co.-Bullion, \$2,800.
